NO-WINNER

Summary

The checkout-flow test has a strong engagement signal but no business winner. t1 significantly increases add-to-cart per user, with a consistent direction across every country, though IN remains inconclusive. t2 significantly decreases add-to-cart overall, with clear declines in FR, BR, and DE and no decisive result elsewhere. Neither variant has a conclusive GMV or purchase-per-user effect: each confidence interval crosses zero, leaving room for meaningful gains or harmful losses. Thus, t1's add-to-cart improvement is not proof of monetization. No sample-ratio mismatch was detected, and the day-level readout reports no underpowered intervals across 56 days per arm. However, 48 tests weaken isolated slice claims, and the weekly ramp was not stable. The defensible verdict remains NO-WINNER: retain t1 as a promising add-to-cart candidate, but require clearer downstream GMV and purchase evidence; reject t2's overall direction.

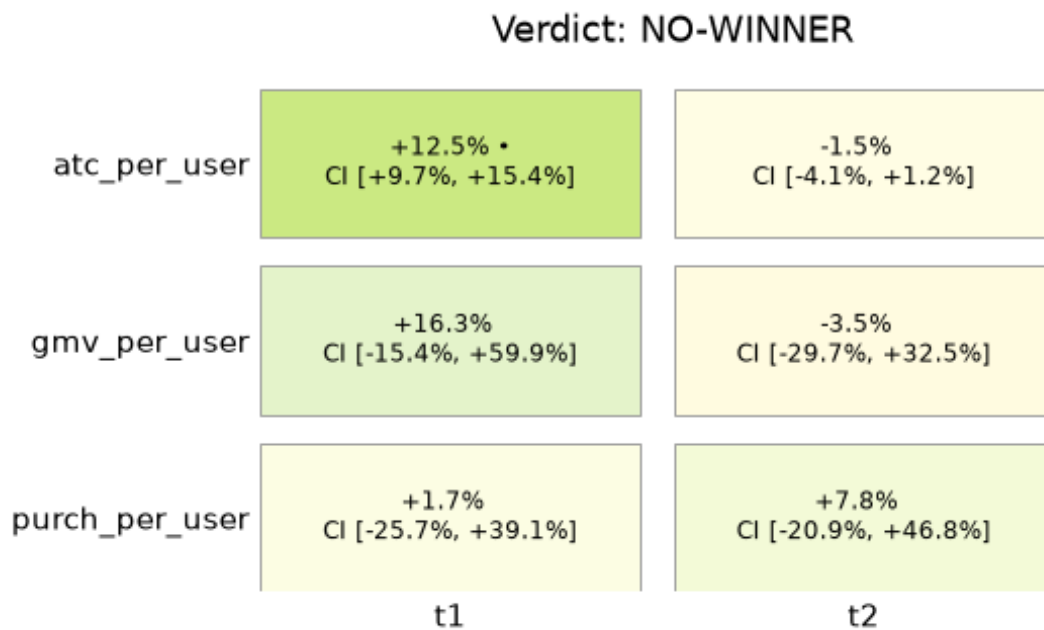

- t1: not powered / no conclusion
- t2: not powered / no conclusion

Weekly ramp (north star)

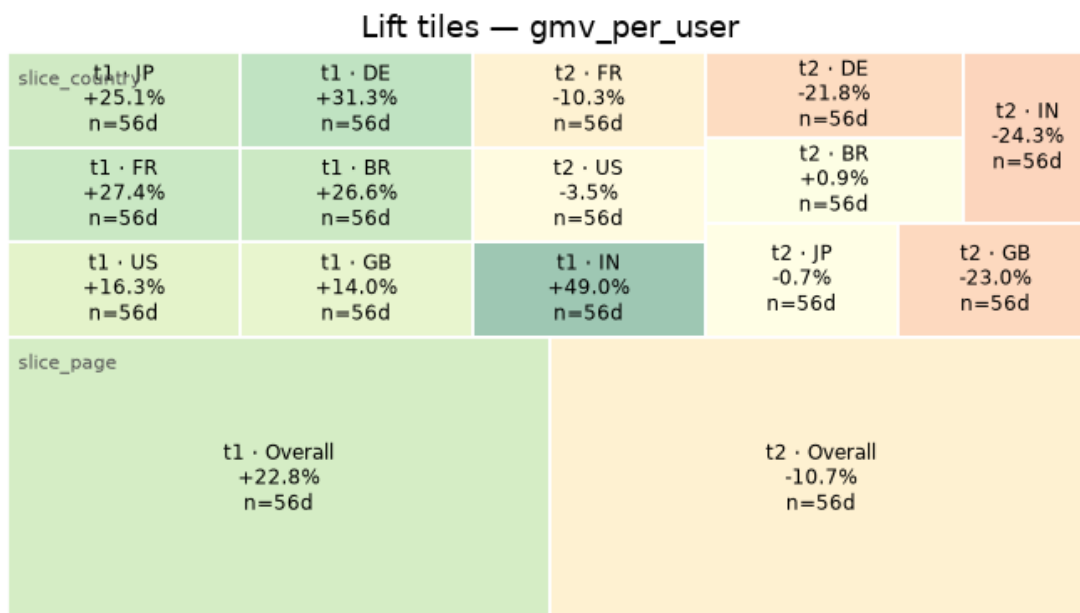

Not stable across weeks — treat headline with caution.

Verdict at a glance

Lift tiles (north star)

Tile size = sample-days; color = lift (fixed [-50%, +50%] scale); washed out = CI overlaps 0; gray = SRM-HOLD.

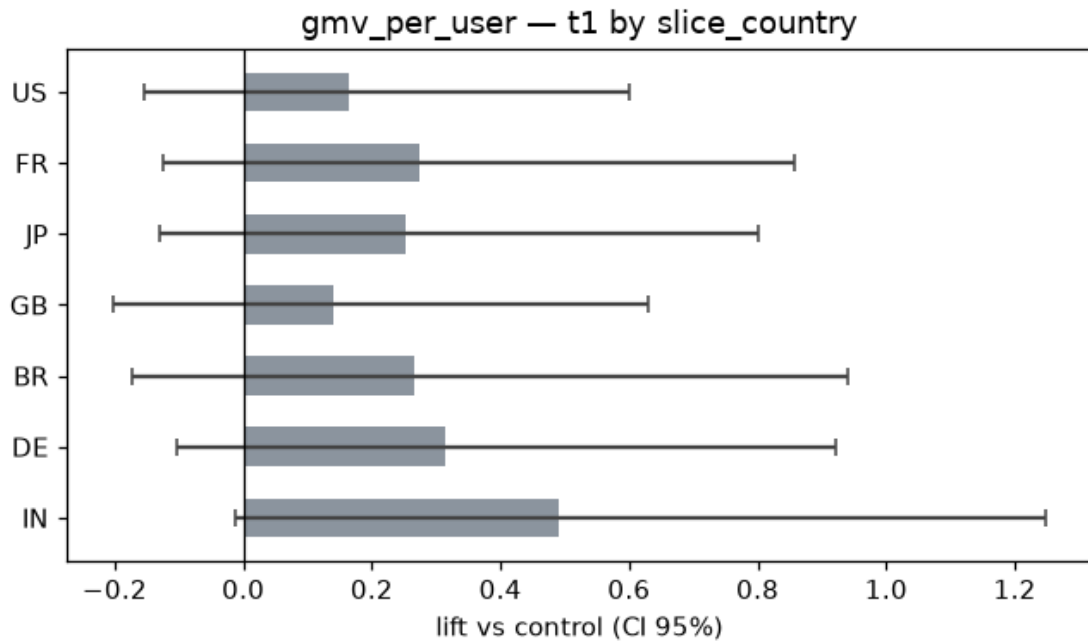

Headline cuts (whole window, pooled)

metric	variant	lift	95% CI	p	sig
atc_per_user	t1	+11.1%	[+9.4%, +12.7%]	0.000	✓
atc_per_user	t2	-3.9%	[-5.4%, -2.4%]	0.000	✓
gmv_per_user	t1	+22.8%	[-9.8%, +67.1%]	0.192	—

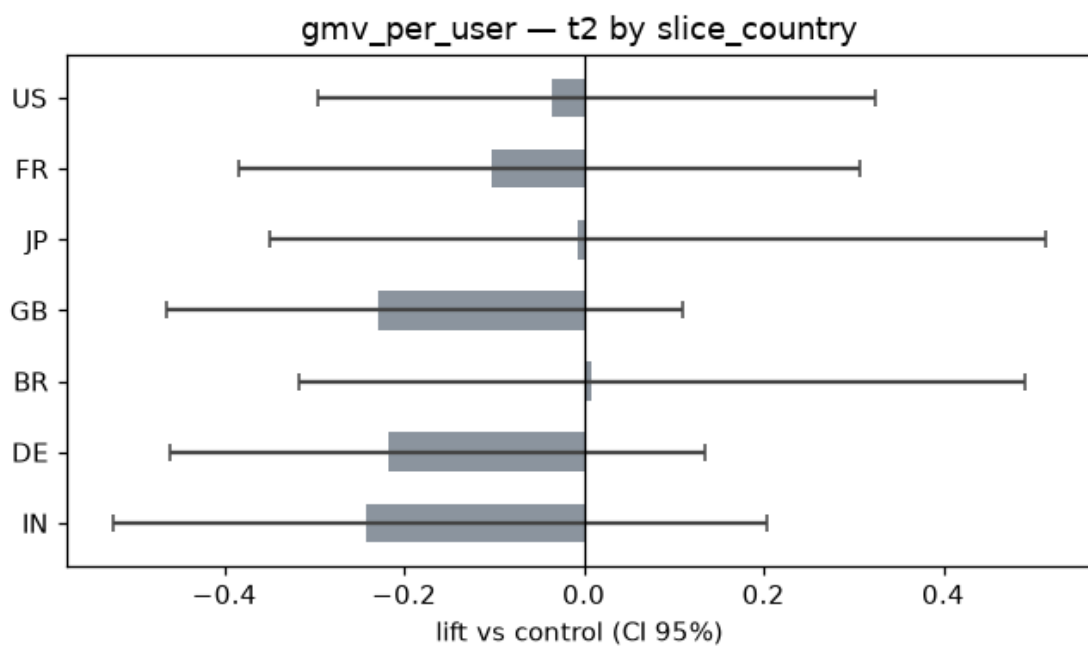

gmv_per_user	t2	-10.7%	[-34.2%, +21.1%]	0.466	—
purch_per_user	t1	+11.3%	[-17.9%, +51.0%]	0.491	—
purch_per_user	t2	+2.5%	[-24.2%, +38.5%]	0.874	—

Method: sum-ratio with day-cluster CI.
